Press Release

Texwipe launches a revolutionary new line of Vertex™ Cleanroom Wipers

Kernersville, NC – Texwipe, an ITW Company, announces the launch of a revolutionary new line of cleanroom wipers designed for the highest assurance of contamination control in critical manufacturing environments. Vertex™ Wipers represent a new frontier in the cleanliness and consistency achievable in cleanroom wipers. Untouched by human hands until they are used, Vertex wipers are manufactured using groundbreaking Texwipe innovation in cleaning, sealing, inspecting, stacking and packaging.

“It is truly remarkable to see the measurable gains in wiper performance that can be realized through completely automated technologies for processing cleanroom wipers” says Les Josey, General Manager of ITW Texwipe. “Our customers increasingly demand the highest levels of process control and consistency of cleanliness from our products. Vertex wipers are a testament to the fact that we can push the performance capabilities of cleanroom wipers through a consistent commitment to innovation, which has been the hallmark of Texwipe for over 45 years.”

Vertex technology offers customers the highest level of consistency in the cleanliness of cleanroom wipers, previously unachievable through manual processes. Texwipe is introducing a full range of high performance cleanroom wipers for critical cleaning applications under the Vertex label. Customers can choose between the High-Durability and High-Sorption Series of wipers for the best performance in those applications. Vertex also features an innovative series of Microdenier cleanroom wipers that are engineered for cleaning highly sensitive surfaces that demand extremely low risk of abrasion.

With the launch of a comprehensive new line of Vertex wipers, Texwipe elevates to The Next Level of Clean™, our strong support of aseptic bio-process manufacturing environments through a range of Sterile Vertex Wipers, specially processed in a HandsFree™ ISO3 micro-environment and packaged in sterile form. Texwipe’s fully automated Roll-2-Bag™ manufacturing ensures that the wipers are untouched until they are used in the aseptic suite.

In launching our new line of premium Vertex Wipers, Texwipe continues its long tradition of leading the cleanroom wiper industry through innovation that drives the quality and performance of cleanroom wipers. Starting in 1964, Texwipe continues to set the standard for innovation in contamination control technologies for the manufacture of wipers, swabs, mops and sterile products for use in controlled environments.

Texwipe brings over four decades of experience in contamination control to offer technical resources, expertise and support for cleanroom customers around the globe.
